Report for New Variable Star Discovery

KAO-EGYPT J214258.21+440520.2

New Variable Star Discovery

Report Date: 28 October 2016

Observer and affiliation:

A. Essam, M. A. El-Sadek, G. M. Hamed, M. Shaban, and Doaa El-Sayed

National Research Institute of Astronomy and Geophysics (NRIAG)

Astronomy Department, Kottamia Astronomical Observatory (KAO), 1.88m reflector telescope.
(80 km east of Cairo)

11421 Helwan, Cairo, Egypt

essam60@yahoo.com

Remark: Detected in the FoV of the star NOVA Cyg 1978

The observations have been carried out over two nights (27&28/9/2016)

VARIABLE: KAO-EGYPT J214258.21+440520.2

RA(J2000)	Dec(J2000)	Type	$V_{mag.}$	Period	Epoch
21 42 58.212	+44 05 20.21	EW	13.65-14.10	0.617898 ^d	2457660.4129±0.0012

1. OBSERVATIONS

- ❖ All the photometric observations have been carried out by using the EEV CCD 42-40 camera with a format of 2048*2048 pixels, cooled by liquid nitrogen attached on the Newtonian focus of the 1.88m Kottamia reflector telescope in **Kottamia Astronomical Observatory (KAO)**, Egypt.
- ❖ The location of Kottamia Astronomical Observatory (KAO) as follows:
Latitude: 29° 56' 02.43" N
Longitude: 31° 49' 40.10" E
Height: 467 m
- ❖ Our main target was studying variability of short period NOVA Cyg 1978 by observed in V, R and I filters. Through the observations we found a new variable star which identified in UCAC4 catalog as UCAC4 671-102525. Table 1 demonstrate coordinate of the new discovered variable (V1), comparison(C), and check star (K). Figure 1 shows the finding chart which having the position of the new variable (V1), comparison (C), and check (K) stars.

Table 1: Coordinates and magnitude of variable, Comparison, and Check stars

Star	ID in UCAC4 Catalog	R.A	Dec
Variable (V)	671-102525	21 42 58.234	+44 05 19.74
Comparison (C)	671-102430	21 42 40.450	+44 01 52.88
Check (K)	671-102408	21 42 37.652	+44 04 42.68

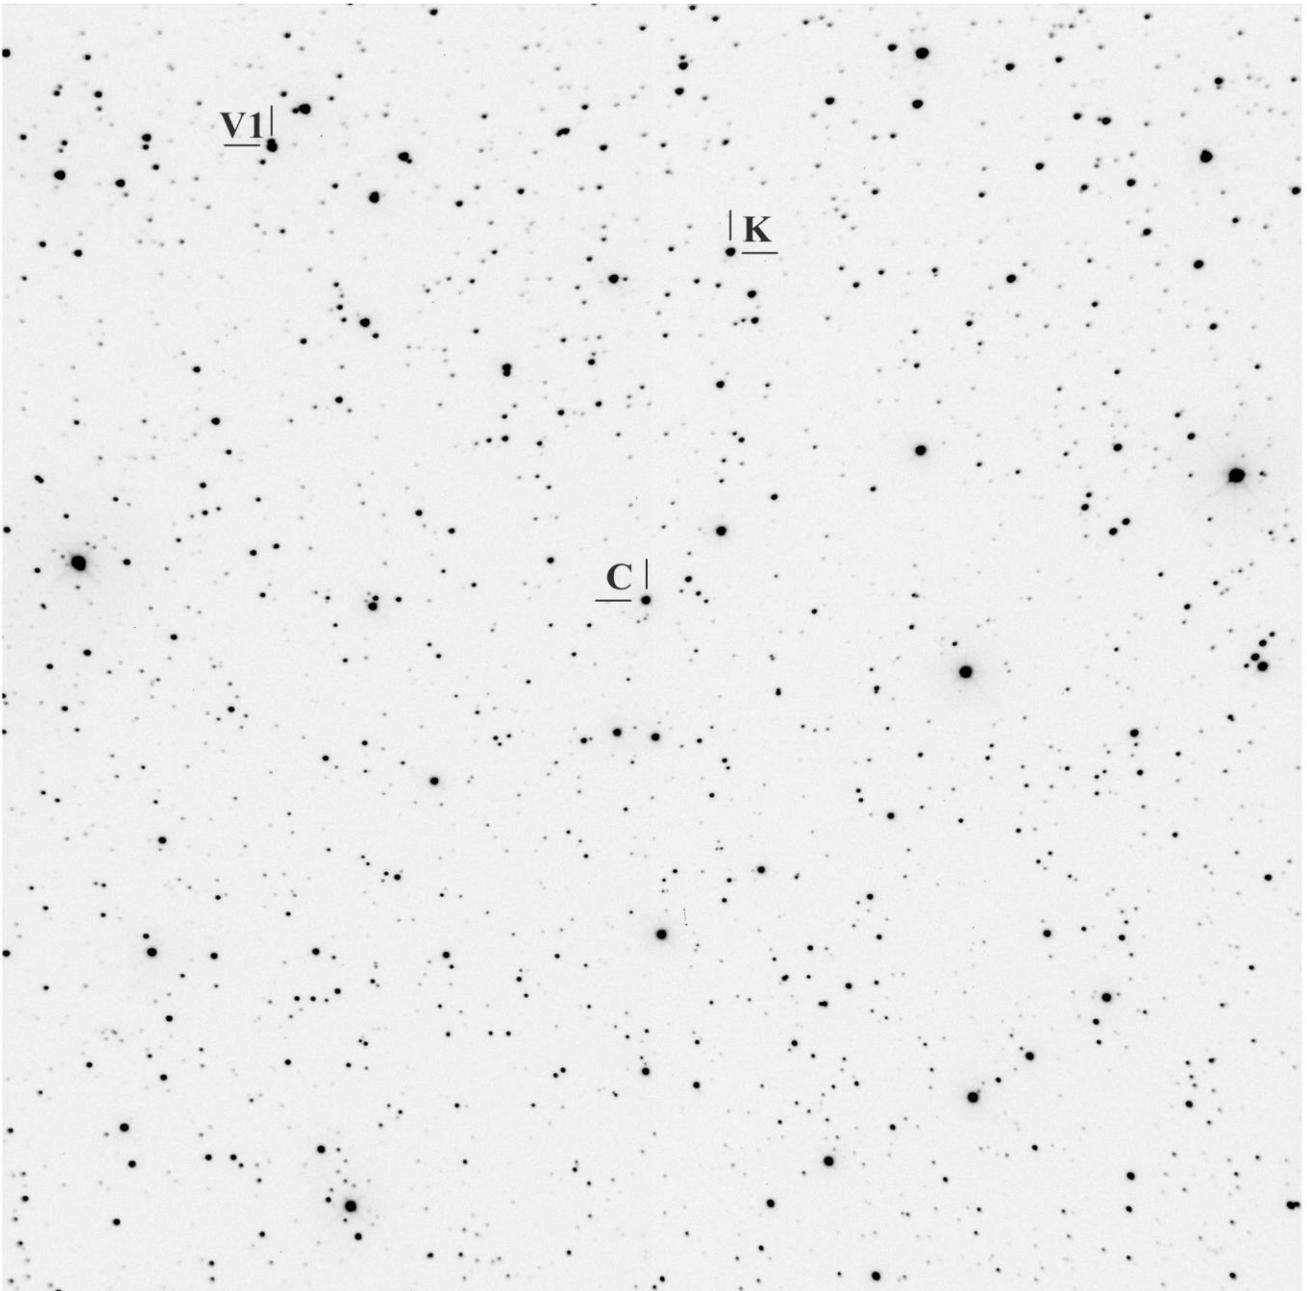

Figure 1. Finding chart which having the new Variable (V1), Comparison (C), and Check (K) stars.

1. PERIOD AND EPOCH OF THE NEW VARIABLE.

- ❖ The Epoch of primary minimum and period had determined using the Peranso software Version 2.50 CBA Belgium Observatory (2011) as shown in Table 2.

Table 2: Epoch and Period of the new discovered variable star UCAC4 479-113658

Object	Epoch HJD (Min I)	Period
UCAC4 479-113658	2457660.4129±0.0012	0.617898 ^d

- ❖ Using the Epoch and the Period in Table 2 to determined the new ephemeris as follows:

❖ Ephemeris of the new discovered variable star is shown in table 2.

$$\text{HJD. (Min. I)} = 2457660.4129 \pm 0.0012 + 0.617898^d \times E \quad (1)$$

Where E is the integer cycle.

❖ Using ephemeris in eq. 1, we determine the phase of our observation as shown in Fig (2).

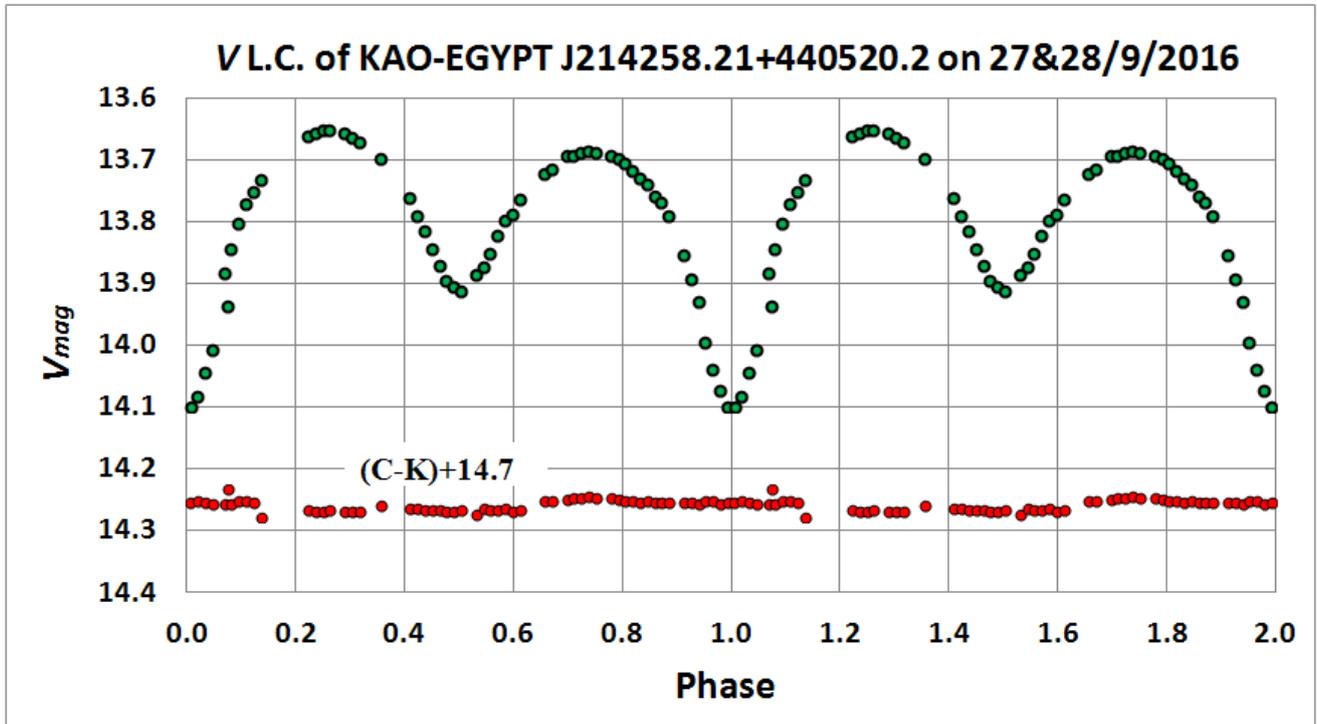

Figure 2. The new discovered variable star KAO-EGYPT J214258.21+440520.2= UCAC4 671-102525 with the [(C-K)+14.7] values in V filter

Notes:

- The system shows slightly different maximum height which indicate that we have an "O'Connell effect".
